

Rosemount 8700 Series Magnetic Flowmeter Systems

THE 8700 SERIES...

- *Rosemount 8712D Transmitter - Easiest to use local operator interface and works with any manufacturer's flowtubes*
- *Rosemount 8712H/8707 High-Signal System - Pulsed dc solutions for the most demanding flow measurement applications*
- *Rosemount 8705 - Fully welded flowtube for maximum protection (standard ISO lay length)*
- *Rosemount 8711 - Economical, compact, and light weight flowtube, provided with alignment rings for easy installation*
- *Rosemount 8732/8742 Transmitter - Integral-mount design eliminates wiring error, backlit display for easy viewing, and explosion-proof housing for hazardous environments*
- *Rosemount 8742 Transmitter - Utilizing advanced diagnostics (high process noise detection, grounding/wiring diagnostic, and electrode signal fault) increase magmeter performance*

Rosemount 8700 Series

Rosemount 8700 Series System Overview

Rosemount 8712D/H

The remote mount Rosemount 8712 transmitter features an easy to use operator interface. The intuitive 15 actuator keypad provides instant access to the most commonly used functions, and the 2 line by 20 character display provide clear indication. Together they provide fast, intuitive, and easy configuration.

The 8712D transmitters operate with all Rosemount magnetic flow meters and the D and U versions provide universal functionality allowing them to operate other manufacturer's flow tubes. The 8712H high signal transmitter provides unprecedented performance in high process noise applications.

Rosemount 8732C

The integral mount Rosemount 8732C transmitter has an explosion proof housing and full RFI/EMI protection that is ideal for harsh environment installations where moisture and contaminant in filtration are possible. With an optional backlit 2 line by 16 character local operator interface, the transmitter can be configured by optical switches to simplify adjustments in hazardous environments without removing the cover.

Rosemount 8714D

The Rosemount 8714D Calibration Standard attaches to a 8712D, 8732, or 8742C transmitter's flowtube connections to ensure traceability to NIST standards and long-term accuracy of the flowmeter system. The 8714D is not compatible with 8712H high-signal transmitter.

Flanged Flowtubes

All flanged Rosemount flowtubes are fabricated from stainless and carbon steel and welded to provide a hermetic seal that protects against moisture and other contaminants. Sizes range from 1/2 inch (15 mm) to 36 inch (900 mm). The sealed housing ensures maximum flowtube reliability by protecting all internal components and wiring from the most hostile environments.

Sanitary Options

The adapter flanges on the 3-A-compliant 8705 are designed to attach to a magnetic flowtube of smaller diameter than the process piping to ensure a crevice-free interface. The adapters provided are polished internally and externally. A more robust sanitary wafer flowtube offering, the Rosemount 8721, has been released (document number 00813-0100-4901).

Wafer Flowtubes

The flangeless design of the 8711 wafer flowtube makes it an economical, compact, and lightweight alternative to flanged magnetic flowmeters. Alignment rings, provided with every Rosemount 8711 flowtube, center the flowtube in the process line and makes the installation easier.

High-Signal Magmeter System ⁽¹⁾

The Rosemount 8707 High-Signal Flowtube, used in conjunction with the 8712H High-Signal Transmitter, forms the Rosemount High-Signal Magnetic Flowmeter System. This system provides stable flow measurement in the most difficult high-noise applications while maintaining the benefits of dc technology. The increased signal strength of the Rosemount® high-signal system is made possible through a combination of flowtube coil design that incorporates the most advance materials and an extremely efficient and innovative coil drive circuit. The increased signal strength of the Rosemount high-signal system, coupled with advanced signal processing and superior filtering techniques, provides the solution to demanding flow measurement applications.

⁽¹⁾ The high-signal magmeter system is not available in Europe.

Unleash the Power of Magmeter Diagnostics with FOUNDATION™ Fieldbus

Increase process stability, reduce commissioning time, and maintenance costs by unleashing the diagnostics found only in the Rosemount 8742C magnetic flowmeter transmitter. The AMSaware 8742 transmitter provides useful information through a backlit display or AMSinside™ a DeltaV™ control system.

The grounding/wiring diagnostic in the 8742C reduces commissioning time by detecting poor process grounding. Proper installation techniques are critical to the success of any in-line measurement device and proper process grounding substantially impacts magnetic flowmeter performance. Once the problem is identified by the transmitter, a red light is triggered in the transducer block (Figure 1) and detailed informative help screens list appropriate recommendations for the grounding/wiring diagnostic (Figure 2).

Process noise caused by slurries, high consistency pulp stock, or upstream chemical additions can result in wavering, unsteady flow measurements. The 8742C high process noise diagnostic monitors the signal to noise ratio and recommends steps to improve flow measurements. If the transmitter detects a low signal-to noise ratio, the high process noise diagnostic is triggered and suggests increasing the coil drive frequency to improve the signal-to-noise ratio (Figure 3). By changing the coil drive frequency, a two to four times improvement in signal stability is typical and results in a more consistent flow measurement and thus creating an opportunity for tighter control.

Flowtube failures caused by liner failure, faulty electrode connections or internal moisture can result in expensive, unscheduled shut-downs. In a standard magmeter installation, this type of flowtube failure could drop the output flowrate by 50% without notifying the user. The 8742C electrode fault diagnostic analyzes the electrode signal to monitor status and then produces a detailed, informative help screen that lists the appropriate remedies when the diagnostic is triggered.

Diagnostics that proactively suggest the optimum software configuration, provide powerful information through AMS help screens, or a local display have never been available before. Each diagnostic has unique help screens. These diagnostics are only the beginning. The 8742C is the standard of the future for magnetic flowmeter diagnostics that increase process stability, reduce commissioning time, and maintenance costs.

Rosemount Magnetic Flowmeters powers PlantWeb through advanced diagnostics including grounding and wiring, high process noise, and electrode fault.

FIGURE 1. Diagnostic Messaging Appears in AMS and local display

FIGURE 2. Informative help screens provide direction to solve problems

Grounding/Wiring Fault

The transmitter detected high levels of 50/60Hz noise caused by improper wiring or poor process grounding.

1. Connect ground rings, grounding electrode, lining protector, or grounding straps. Grounding diagrams are included in the flowtube products manual.
2. Verify flowtube is full.
3. Verify wiring between flowtube and transmitter is prepared properly. Shielding should be stripped back less than 2.5 cm (1in.).
4. Use separate shielded twisted pairs for wiring between flowtube and transmitter.
5. Properly connect the wiring between the flowtube and the transmitter on the flowtube.

To turn off grounding/wiring diagnostic, go to the diagnostic screen in the transducer block properties.

FIGURE 3. Increasing coil drive frequency increases the signal to noise ratio

Rosemount 8712D/H Transmitter Specifications

Functional Specifications

Flowtube Compatibility

Rosemount 8712C is compatible with all Rosemount flowtubes: 8705, 8707, 8711, 8721, and 570TM. The 8712D/U is also compatible with AC and DC powered flowtubes of other manufacturers. The 8712H is only compatible with 8707 High-Signal flowtube.

Flowtube Coil Resistance

Rosemount 8712C: 25 Ω maximum

Rosemount 8712D/U: 350 Ω maximum

Rosemount 8712H: 12 Ω maximum

Flow Rate Range

Capable of processing signals from fluids that are traveling between 0.04 and 30 ft/s (0.01 to 10 m/s) for both forward and reverse flow in all flowtube sizes. Full scale continuously adjustable between -30 and 30 ft/s (-10 to 10 m/s).

Conductivity Limits

Process liquid must have a conductivity of 5 microsiemens/cm (5 micromhos/cm) or greater for Rosemount 8712D. Process liquid must have a conductivity of 50 microsiemens/cm (50 micromhos/cm) for the 8712H. Excludes the effect of interconnecting cable length in remote mount transmitter installations.

Power Supply

8712D: 90-250 V ac $\pm$ 10%, 50-60 Hz or 12-42 V dc

8712H: 115 V ac $\pm$ 10%, 50-60 Hz

DC Load Limitations (Analog Output)

Maximum loop resistance is determined by the voltage level of the external power supply, as described by:

$$R_{\max} = 41.7(V_{\text{ps}} - 10.8)$$

V_{ps} = Power Supply Voltage (Volts)

$R_{\max}$ = Maximum Loop Resistance (Ohms)

NOTE

HART Communication requires a minimum loop resistance of 250 ohms.

Supply Current Requirements

Units powered by 10-30 V dc power supply may draw up to 2 amp of current.

$$I = 20/V$$

I = Supply current requirement (Amps)

V = Power supply voltage (Volts)

Installation Coordination

Installation (overvoltage) Category II

Power Consumption

8712D: 10 watts maximum

8712H: 300 watts maximum

Ambient Temperature Limits

Operating

8712D: -20 to 140°F (-29 to 60 °C) with local operator interface

-40 to 165°F (-40 to 74°C) without local operator interface

8712H: -20 to 130 °F (-29 to 54 °C) with or without local operator interface

Storage

-22 to 176 °F (-40 to 80 °C)

Humidity Limits

0-100% RH at 120 °F (49 °C), decreases linearly to 10% RH at 130 °F (54 °C)

Enclosure Ratings

Enclosure Type 4X, IP65

Rosemount 8700 Series

Output Signals

Analog Output Adjustment

4–20 mA, jumper-selectable as internally or externally powered 5 to 24 V dc; 0 to 1000 Ω load.

Engineering units—lower and upper range values are user-selectable.

Output automatically scaled to provide 4 mA at lower range value and 20 mA at upper range value. Full scale continuously adjustable between -30 and 30 ft/s (-10 to 10 m/sec), 1 ft/s (0.3 m/s) minimum span.

HART Communications, digital flow signal, superimposed on 4–20 mA signal, available for control system interface. 250 Ω required for HART communications.

Scalable Frequency Adjustment

8712H: 0-1000 Hz, externally powered at 5 to 24 V dc, transistor switch closure up to 5.75 W. Pulse value can be set to equal desired volume in selected engineering units. Pulse width adjustable from 0.5 to 100 m/s. Local operator interface automatically calculates and displays maximum allowable output frequency.

8712D: 0-10,000Hz, externally powered at 5 to 24 V dc, transistor switch closure supports power loads up to 2W for frequencies up to 4000Hz, and 5 V dc at 0.1 W at maximum frequency of 10,000 Hz. Pulse can be set to equal desired velocity or volume in user selectable engineering units. Pulse width is adjustable from 1.5 to 500 msec, below 1.5 msec pulse width automatically switches to 50% duty cycle.

Auxiliary Output Function

Externally powered at 5 to 24 V dc, transistor switch closure up to 3 W to indicate either:

Reverse Flow: Activates switch closure output when reverse flow is detected. The reverse flow rate is displayed.

Zero Flow: Activates switch closure output when flow goes to 0 ft/s.

Positive Zero Return

Forces outputs of the transmitter to the zero flow rate signal level. Activated by applying a contact closure.

Software Lockout

Security lockout jumper on the electronics board can be set to deactivate all LOI and HART-based communicator functions to protect configuration variables from unwanted or accidental change.

Output Testing

Analog Output Test

Transmitter may be commanded to supply a specified current between 3.75 and 23.25 mA

Pulse Output Test

8712H: Transmitter may be commanded to supply a specified frequency between 1 and 1000 Hz

8712D: Transmitter may be commanded to supply a specified frequency between 1 pulse/ day and 10,000 Hz

Turn-on Time

8712H: 30 minutes to rated accuracy from power up, 5 seconds from power interruption

8712D: 5 minutes to rated accuracy from power up, 5 seconds from power interruption

Start-up Time

0.2 seconds from zero flow

Low Flow Cutoff

Adjustable between 0.04 and 1 ft/s (0.01 and 0.3 m/s). Below selected value, output is driven to the zero flow rate signal level. (8712D is adjustable between 0.01 and 1 ft/s).

Overrange Capability

Signal output will remain linear until 110% of upper range value. The signal output will remain constant above these values. Out of range message displayed on LOI and the HART Communicator.

Damping

8712H: Adjustable between 0.2 and 256 seconds

8712D: Adjustable between 0.0 and 256 seconds

Flowtube Compensation

Rosemount flowtubes are flow-calibrated and assigned a calibration factor at the factory. The calibration factor is entered into the transmitter, enabling interchangeability of flowtubes without calculations or a compromise in accuracy.

8712D transmitters and other manufacturer's flowtubes can be calibrated at known process conditions or at the Rosemount NIST-Traceable Flow Facility. Transmitters calibrated on site require a two-step procedure to match known flow rate.

Performance Specifications

(System specifications are given using the frequency output and with the unit at referenced conditions.)

Accuracy

Rosemount 8712H with 8707 Flowtube

System accuracy is $\pm 0.5\%$ of rate from 3 to 30 ft/s (1 to 10 m/s); between 0.04 and 3.0 ft/s (0.01 and 0.3 m/s), the system has an accuracy of ± 0.005 ft/s (0.0015 m/s). Analog output has the same accuracy as frequency output plus an additional 0.1% of span.

Rosemount 8712D with Other Manufacturers' Flowtubes

When calibrated in the Rosemount Flow Facility, system accuracies as good as 0.5% of rate can be attained. Analog output has the same accuracy as frequency output, plus an additional 0.1% of span.

There is no accuracy specification for other manufacturers' flowtubes calibrated in the process line.

Rosemount 8712D with 8705 and 8721 Flowtube

System accuracy is $\pm 0.5\%$ of rate from 1 to 40 ft/s (0.3 to 12 m/s); between 0.04 and 1.0 ft/s (0.01 and 0.3 m/s), the system has an accuracy of ± 0.005 ft/s (0.0015 m/s). Analog output has the same accuracy as frequency output plus an additional 0.05% of span.

Rosemount 8712D with 8711 Flowtube

System accuracy is $\pm 0.5\%$ of rate from 3 to 40 ft/s (1 to 12 m/s); below 3 ft/s (1 m/s), the system has an accuracy of ± 0.015 ft/s (0.005 m/s). Analog output has the same accuracy as frequency output plus an additional 0.1% of span.

Vibration Effect

$\pm 0.1\%$ of span per SAMA PMC 31.1, Level 2

Repeatability

$\pm 0.1\%$ of reading

Response Time

0.2 seconds maximum response to step change in input

Stability

$\pm 0.1\%$ of rate over six months

Ambient Temperature Effect

8712H: $\pm 1\%$ per 100 °F (37.8 °C)

8712D: 0.25% over operating temperature range

RFI Effect

Class 1, A, B, C: $\pm 0.5\%$ of span at 3 V/m per SAMA PMC 33.1, wires and conduit

EN61326-1 1997 + A1/A2 (Industrial) electromagnetic compatibility (EMC) for process and laboratory apparatus.

Supply Voltage Effect

Transmitter meets supply voltage effect requirements of SAMA PMC 31.1, Section 5.10.1 through 5.10.5. Transmitter withstands surges in supply voltage as specified in IEEE 472, 1974

Physical Specifications

Materials of Construction

Housing

Low-copper aluminum, NEMA 4X and IEC 60529 IP65

Pollution Degree 2

Paint

Polyurethane

Cover Gasket

Rubber

Electrical Connections

Three $\frac{3}{4}$ –14 NPT connections provided on the base of the transmitter. Screw terminals provided for all of the connections. Power wiring connected to the transmitter only. Remote mounted transmitters require only a single conduit connection to the flowtube. Integrally mounted transmitters are factory wired to the flowtube.

Line Power Fuses

115 V ac systems

1 amp, Quick-acting Bussman AGCI or equivalent.

5 amp, Quick-acting Bussman AGCI or equivalent (Rosemount 8712H only).

230 V ac systems

$\frac{1}{2}$ amp, Quick-acting Bussman AGCI or equivalent

90–250 V ac systems (8712D)

1 amp, Quick-acting Bussman AGCI or equivalent

10–30 V dc systems

3 amp, Quick-acting Bussman AGCI or equivalent

Transmitter Weight

Transmitter approximately 9 lb (4 kg). Add 1 lb (0.5 kg) for local operator interface.

Rosemount 8732C Transmitter Specifications

Functional Specifications

Flowtube Compatibility

Compatible with Rosemount 8705, 8711, and 8721 flowtubes.

Flowtube Coil Resistance

25 Ω maximum

Flow Rate Range

Capable of processing signals from fluids that are traveling between 0.04 and 30 ft/s (0.01 to 10 m/s) for both forward and reverse flow in all flowtube sizes. Full scale continuously adjustable between -30 and 30 ft/s (-10 to 10 m/s).

Conductivity Limits

Process liquid must have a conductivity of 5 microsiemens/cm (5 micromhos/cm) or greater for 8732C. Excludes the effect of interconnecting cable length in remote mount transmitter installations.

Power Supply

85 -250 V ac $\pm 10\%$, 50-60 Hz or 15-50 V dc

DC Load Limitations (Analog Output)

Maximum loop resistance is determined by the voltage level of the external power supply, as described by:

$$R_{\max} = 41.7(V_{ps} - 10.8)$$

V_{ps} = Power Supply Voltage (Volts)

$R_{\max}$ = Maximum Loop Resistance (Ohms)

NOTE

HART Communication requires a minimum loop resistance of 250 ohms.

Supply Current Requirements

Units powered by 15-50 V dc power supply may draw up to 1 amp of current.

Output Signals

Analog Output Adjustment

4–20 mA, jumper-selectable as internally or externally powered 5 to 24 V dc; 0 to 1000 Ω load.

Engineering units—lower and upper range values are user-selectable.

Output automatically scaled to provide 4 mA at lower range value and 20 mA at upper range value. Full scale continuously adjustable between -30 and 30 ft/s (-10 to 10 m/sec), 1 ft/s (0.3 m/s) minimum span.

HART Communications, digital flow signal, superimposed on 4–20 mA signal, available for control system interface. 250 Ω required for HART communications.

Scalable Frequency Adjustment

0-1000 Hz, externally powered at 5 to 24 V dc, translator switch closure up to 5.75 W. Pulse value can be set to equal desired volume in selected engineering units. Pulse width adjustable from 0.5 to 100 m/s. Local operator interface automatically calculates and displays maximum allowable output frequency.

Auxiliary Output Function

Externally powered at 5 to 24 V dc, transistor switch closure up to 3 W to indicate either:

Reverse Flow: Activates switch closure output when reverse flow is detected. The reverse flow rate is displayed.

Zero Flow: Activates switch closure output when flow goes to 0 ft/s.

Software Lockout

Security lockout switch on the electronics board can be set to deactivate all LOI and HART-based communicator functions to protect configuration variables from unwanted or accidental change.

Display Lockout

All optical switches on the display can be locked locally from the display layout configuration screen by holding the upper right optical switch for 20 seconds. The display can be reactivated holding the same switch for 20 seconds.

Output Testing

Analog Output Test

Transmitter may be commanded to supply a specified current between 3.75 and 23.25 mA.

Pulse Output Test

Transmitter may be commanded to supply a specified frequency between 1 and 1000 Hz.

Turn-on Time

30 minutes to rated accuracy from power up;
5 seconds from power interruption

Start-up Time

0.2 seconds from zero flow

Low Flow Cutoff

Adjustable between 0.001 and 1 ft/s (0.0003 and 0.3 m/s). Below selected value, output is driven to the zero flow rate signal level.

Overrange Capability

Signal output will remain linear until 110% of upper range value or 33 ft/s. The signal output will remain constant above these values. Out of range message displayed on LOI and the HART Communicator.

Damping

Adjustable between 0.2 and 256 seconds

Flowtube Compensation

Rosemount flowtubes are flow-calibrated and assigned a calibration factor at the factory. The calibration factor is entered into the transmitter, enabling interchangeability of flowtubes without calculations or a compromise in accuracy.

Performance Specifications

(System specifications are given using the frequency output and with the unit at reference conditions.)

Accuracy

Rosemount 8732C with 8705 or 8721 Flowtubes:

System accuracy is $\pm 0.5\%$ of rate from 1 to 30 ft/s (0.3 to 10 m/s); below 1.0 ft/s (0.3 m/s), the system has an accuracy of ± 0.005 ft/s (0.0015 m/s). Analog output has the same accuracy as frequency output plus an additional 0.1% of span.

Rosemount 8732C with 8711 Flowtube:

System accuracy is $\pm 0.5\%$ of rate from 3 to 30 ft/s (0.9 to 10 m/s); below 3 ft/s (0.9 m/s), the system has an accuracy of ± 0.015 ft/s (0.005 m/s). Analog output has the same accuracy as frequency output plus an additional 0.1% of span.

Vibration Effect

IEC 60770-1

Repeatability

$\pm 0.1\%$ of reading

Response Time

0.2 seconds maximum response to step change in input

Stability

$\pm 0.1\%$ of rate over six months

Ambient Temperature Effect

$\pm 0.25\%$ change over operating temperature range

EMC Compliance

EN61326-1 1997 + A1/A2 (Industrial) electromagnetic compatibility (EMC) for process and laboratory apparatus.

Turn-on Time

30 minutes to rated accuracy from power up;
 10 seconds communication from power interruption

Start-up Time

0.2 seconds from zero flow

Low Flow Cutoff

Adjustable between 0 and 1 ft/s. Below selected value, output is driven to the zero flow rate.

Overrange Capability

Signal output continues to 110% of upper range value setting, then remains constant. Messages are supplied to the fieldbus network.

Damping

Adjustable between 0 and 255 seconds

Performance Specifications

(System specifications are given using the unit at referenced conditions.)

Accuracy

Rosemount 8742C Transmitter with 8705 and 8721 Flowtubes

System accuracy is $\pm 0.5\%$ of rate from 1 to 40 ft/s (0.3 to 12 m/s); includes combined effects of linearity, hysteresis, repeatability, and calibration uncertainty; below 1.0 ft/s (0.3 m/s), the system has an accuracy of ± 0.005 ft/s (0.0015 m/s).

Rosemount 8742C Transmitter with 8711 Flowtube

System accuracy is $\pm 0.5\%$ of rate from 3 to 40 ft/s (0.9 to 12 m/s); includes combined effects of linearity, hysteresis, repeatability, and calibration uncertainty; below 3 ft/s (0.9 m/s), the system has an accuracy of ± 0.015 ft/s (0.005 m/s).

Vibration Effect

IEC 60770-1

Repeatability

$\pm 0.1\%$ of reading

Response Time

0.2 seconds maximum response to step change in input

Stability

Electrical Connections

Two $\frac{3}{4}$ –14 NPT with number 8 screw terminal connections are provided for electrical wiring. PG13.5 and CM20 adapters are available. Screw terminals provided for all connections. Power wiring connected to transmitter only. Integrally mounted transmitters are factory wired to the flowtube.

Mounting

Integrally mounted transmitters do not require interconnecting cables. The local display and transmitter can be rotated in 90° increments. Remote mounted transmitters require only a single conduit connection to the flowtube.

Weight

Approximately 7 pounds (3.2 kg). Add 0.5 pounds (0.5 kg) for local display.

Rosemount 8705 Flanged and 8707 High-Signal Flanged Flowtubes Specifications

Functional Specifications

Service

Conductive liquids and slurries

Line Sizes

$\frac{1}{2}$ –36 inch (15–900 mm) for Rosemount 8705

3–36 inch (80–600 mm) for Rosemount 8707

Interchangeability

Rosemount 8705 Flowtubes are interchangeable with 8712D, 8732, and 8742C Transmitters. Rosemount 8707 High-Signal Flowtubes are interchangeable with 8712H High-Signal Transmitters. System accuracy is maintained regardless of line size or optional features. Each flowtube nameplate has a sixteen-digit calibration number that can be entered into a transmitter through the Local Operator Interface (LOI) or the HART Communicator on the 8712H and the 8732C. In a FOUNDATION™ fieldbus environment, the 8742C can be configured using the DeltaV™ fieldbus configuration tool or another FOUNDATION fieldbus configuration device. No further calibration is necessary.

Upper Range Limit

30 ft/s (10 m/s)

Process Temperature Limits

Teflon (PTFE) Lining

–20 to 350 °F (–29 to 177 °C)

Tefzel (ETFE) Lining

–20 to 300 °F (–29 to 149 °C)

PFA Lining

–20 to 350 °F (–29 to 177 °C)

Polyurethane Lining

0 to 140 °F (–18 to 60 °C)

Neoprene Lining

0 to 185 °F (–18 to 85 °C)

Linatex Lining

0 to 158 °F (–18 to 70 °C)

Ambient Temperature Limits

–30 to 150 °F (–34 to 65 °C)

Pressure Limits

See Table 2 and Table 4

Vacuum Limits

Teflon (PTFE) Lining

Full vacuum to 350 °F (177 °C) through 4-inch (100 mm) line sizes. Consult factory for vacuum applications with line sizes of 6 inches (150 mm) or larger.

All Other Standard Flowtube Lining Materials

Full vacuum to maximum material temperature limits for all available line sizes.

Submergence Protection

IP 68. Continuous to 30 feet (10 meters)

Recommended with sealed cable glands

Conductivity Limits

Process liquid must have a conductivity of 5 microsiemens/cm (5 micromhos/cm) or greater for 8705. Process liquid must have a conductivity of 50 microsiemens/cm (50 micromhos/cm) for 8707 when used with 8712H, 5 microsiemens/cm when used with other transmitters. Excludes the effect of interconnecting cable length in remote mount transmitter installations.

TABLE 2. Temperature vs. Pressure Limits⁽¹⁾

Flowtube Temperature vs. Pressure Limits for ASME B16.5 Class Flanges (¹ / ₂ - to 36-inch line sizes) ⁽²⁾					
Flange Material	Flange Rating	Pressure			
		@ -20 to 100 °F (-29 to 38 °C)	@ 200 °F (93 °C)	@ 300 °F (149 °C)	@ 350 °F (177 °C)
Carbon Steel	Class 150	285 psi	260 psi	230 psi	215 psi
	Class 300	740 psi	675 psi	655 psi	645 psi
	Class 600 ⁽³⁾	1000 psi	800 psi	700 psi	650 psi
	Class 600 ⁽⁴⁾	1480 psi	NA	NA	NA
	Class 900	2220 psi			
304 Stainless Steel	Class 150	275 psi	235 psi	205 psi	190 psi
	Class 300	720 psi	600 psi	530 psi	500 psi
	Class 600 ⁽⁵⁾	1000 psi	800 psi	700 psi	650 psi
	Class 600 ⁽⁶⁾	1440 psi	NA	NA	NA
	Class 900	2160 psi			

(1) Liner temperature limits must also be considered. Polyurethane, Linatex, and Neoprene have temperature limits of 140°F, 158°F, and 185°F, respectively.

(2) 30- and 36-inch AWWA C207 Table 3 Class D rated to 150 psi at atmospheric temperature.

(3) Option Code C6

(4) Option Code C7

(5) Option Code S6

(6) Option Code S7

TABLE 3. Temperature vs. Pressure Limits⁽¹⁾

Flowtube Temperature vs. Pressure Limits for AS2129 Table D and E Flanges (4- to 24-inch line sizes)					
Flange Material	Flange Rating	Pressure			
		@ -200 to 50 °F (-320 to 122 °C)	@ 100 °F (212 °C)	@ 150 °F (302 °C)	@ 200 °F (392 °C)
Carbon Steel	D	101.6 psi	101.6 psi	101.6 psi	94.3 psi
	E	203.1 psi	203.1 psi	203.1 psi	188.6 psi

(1) Liner temperature limits must also be considered. Polyurethane, Linatex, and Neoprene have temperature limits of 140°F, 158°F, and 185°F, respectively.

TABLE 4. Temperature vs. Pressure Limits⁽¹⁾

Flowtube Temperature vs. Pressure Limits for DIN Flanges (15 to 600 mm line sizes)					
Flange Material	Flange Rating	Pressure			
		@ -196 to 50 °C (-320 to 122 °F)	@ 100 °C (212 °F)	@ 150 °C (302 °F)	@ 175 °C (347 °F)
Carbon Steel	PN 10	10 bar	10 bar	9.7 bar	9.5 bar
	PN 16	16 bar	16 bar	15.6 bar	15.3 bar
	PN 25	25 bar	25 bar	24.4 bar	24.0 bar
	PN 40	40 bar	40 bar	39.1 bar	38.5 bar
304 Stainless Steel	PN 10	9.1 bar	7.5 bar	6.8 bar	6.5 bar
	PN 16	14.7 bar	12.1 bar	11.0 bar	10.6 bar
	PN 25	23 bar	18.9 bar	17.2 bar	16.6 bar
	PN 40	36.8 bar	30.3 bar	27.5 bar	26.5 bar

(1) Liner temperature limits must also be considered. Polyurethane, Linatex, and Neoprene have temperature limits of 140°F, 158°F, and 185°F, respectively.

Performance Specifications

(System specifications are given using the frequency output and with the unit at referenced conditions.)

Accuracy

Rosemount 8705 with 8712D, 8732C, or 8742C

±0.5% of rate from 1 to 30 ft/s (0.3 to 10 m/s). Includes combined effects of linearity, hysteresis, repeatability, and calibration uncertainty. Accuracy is ±0.005 ft/s (±0.0015 m/s) from low-flow cutoff to 1.0 ft/s (0.3 m/s).

Rosemount 8707 with 8712D/H, 8732C, or 8742C

±0.5% of rate from 3 to 30 ft/s (1 to 10 m/s). Include combined effects of linearity, hysteresis, repeatability and calibration uncertainty. Accuracy is ±0.015 ft/s (±0.0045 m/s) from low-flow cutoff to 3.0 ft/s (1 m/s).

Vibration Effect

IEC 60770-1

Mounting Position Effect

None when installed to ensure flowtube remains full

AISI Type 304 SST Sanitary Tri-Clover

3-A-compliant quick disconnect ferrule-mounted to ASME B16.5 (ANSI) Class 150 flange; 0.5- to 3-inch.

Electrical Connections

Two ¾–14 NPT connections with number 8 screw terminals are provided in the terminal enclosure for electrical wiring.

Grounding Electrode

A grounding electrode is installed similarly to the measurement electrodes through the flowtube lining on 8705 flowtubes. It is available in all electrode materials.

Grounding Rings

Grounding rings are installed between the flange and the tube face on both ends of the flowtube. Single ground rings can be installed on either end of the flowtube. They have an I.D. slightly larger than the flowtube I.D. and an external tab to attach ground wiring. Grounding rings are available in 316L SST, Hastelloy-C, titanium, and tantalum.

Lining Protectors

Lining protectors are installed between the flange and the tube face on both ends of the flowtube. The leading edge of lining material is protected by the lining protector; lining protectors cannot be removed once they are installed. Lining protectors are available in 316L SST, Hastelloy-C, and titanium.

Dimensions

See Figure 6, Figure 7, and Figure 8 and Table 12, Table 13, and Table 14.

Weight

See Table 5 and Table 6

Rosemount 8711 Wafer Flowtube Specifications

SPECIFICATIONS

Functional Specifications

Service

Conductive liquids and slurries

Line Sizes

0.15- through 8-inch (4 through 200 mm)

Interchangeability

Rosemount 8711 Flowtubes are interchangeable with 8732 and 8742C Transmitters. System accuracy is maintained regardless of line size or optional features. Each flowtube nameplate has a sixteen-digit calibration number that can be entered into a transmitter through the Local Operator Interface (LOI) or the HART Communicator on the Rosemount 8712H and the 8732C. In a FOUNDATION fieldbus environment, the 8742C can be configured using the DeltaV fieldbus configuration tool or another FOUNDATION fieldbus configuration device. No further calibration is necessary.

Upper Range Limit

30 ft/s (10 m/s)

Process Temperature Limits

Tefzel (ETFE) Lining

–20 to 300 °F (–29 to 149 °C) for 0.5- through 8-inch (15–200 mm) line sizes

–20 to 200 °F (–29 to 93 °C) for 0.15- and 0.3-inch (4 and 8 mm) line sizes

Teflon (PTFE) Lining

–20 to 350 °F (–29 to 177 °C)

Ambient Temperature Limits

–30 to 150 °F (–34 to 65 °C)

Maximum Safe Working Pressure at 100 °F (38 °C)

Tefzel (ETFE) Lining

Full vacuum to 740 psi (5.1 MPa) for 0.5- through 8-inch (15 through 200 mm) flowtubes

285 psi (1.96 MPa) for 0.15- and 0.30-inch (4 and 8 mm) flowtubes

Teflon (PTFE) Lining

Full vacuum through 4-inch (100 mm) line sizes. Consult factory for vacuum applications with line sizes of 6 inches (150 mm) or larger.

Conductivity Limits

Process liquid must have a conductivity of 5 microsiemens/cm (5 micromhos/cm) or greater for 8711. Excludes the effect of interconnecting cable length in remote mount transmitter installations.

Performance Specifications

(System specifications are given using the frequency output and with the unit at referenced conditions.)

Accuracy

Rosemount 8711 with 8712D, 8732C, or 8742C Transmitters

EUROPEAN DIRECTIVE INFORMATION

The EC declaration of conformity for all applicable European directives for this product can be found on our website at www.rosemount.com. A hard copy may be obtained by contacting our local sales office.

ATEX Directive

Rosemount Inc. complies with the ATEX Directive.

Type n protection type in accordance with EN50 021

- Closing of entries in the device must be carried out using the appropriate EExe or EExn metal cable gland and metal blanking plug or any appropriate ATEX approved cable gland and blanking plug with IP66 rating certified by an EU approved certification body.

European Pressure Equipment Directive (PED) (97/23/EC)

Model 8705 Magnetic Flowmeter flowtubes in line size and flange combinations:

Line Size: 1 1/2 inch - 3 inch with all flanges available.

Line Size: 4 inch - 24 inch with all DIN flanges and ANSI 150 and ANSI 300 flanges.

Line Size: 30 inch - 36 inch with AWWA 125 flanges
QS Certificate of Assessment - EC No. PED-H-20
Module H Conformity Assessment

Model 8711 Magnetic Flowmeter Flowtubes

Line Sizes: 1.5, 2, 3, 4, 6, and 8 inch

QS Certificate of Assessment - EC No. PED-H-20
Module H Conformity Assessment

Model 8721 Sanitary Magmeter Flowtubes in line sizes of 1 1/2 inch and larger:

Module A Conformity Assessment

All other Model 8705/8711/8721 Flowtubes — in line sizes of 1 inch and less: Sound Engineering Practice

Flowtubes that are SEP are outside the scope of PED and cannot be marked for compliance with PED.

Mandatory CE-marking for flowtubes in accordance with Article 15 of the PED can be found on the flowtube body (CE 0575).

Flowtube category I is assessed for conformity per module A procedures.

Flowtube categories II – IV, use module H for conformity assessment procedures.

Electro Magnetic Compatibility (EMC) (89/336/EEC)

All Models EN 50081-1: 1992, EN 50082-2: 1995,
EN 61326: 1997/ A1:1998 / A2:2000

Installed signal wiring should not be run together and should not be in the same cable tray as AC power wiring.

Device must be properly grounded or earthed according to local electric codes.

To improve protection against signal interference, shielded cable is recommended.

Low Voltage Directive (93/68/EEC)

All Models 8732, Model 8742C - AC
EN 61010-1: 1995

Other important guidelines

Only use new, original parts.

To prevent the process medium escaping, do not unscrew or remove process flange bolts, adapter bolts or bleed screws during operation.

Maintenance shall only be done by qualified personnel.

CE CE Marking (8712D Only)

Compliance with European Union EMC and Low Voltage Directives. (Note: CE Marking is not available on Model 8712H).

HAZARDOUS LOCATION CERTIFICATIONS

Equivalent Hazardous Location Certifications for flowtube and transmitter must match in integrally-mounted magnetic flowmeter systems. Remote-mounted systems do not require matched hazardous location certification option codes.

SPECIAL CONDITIONS FOR SAFE USE (X (03ATEX2052X):

If the Model 8732 Flow Transmitter is used integrally with the Model 8705 or 8711 Flowtubes, it shall be assured that the mechanical contact areas of the Flowtube and Flow Transmitter comply with the requirements for flat joints according to standard EN 50018, clause 5.2.

The relation between ambient temperature, process temperature, and temperature class is to be taken from the table under (15 - description) above. **(See Table 9)**

The electrical data is to be taken from the summary under (15 - electrical data) above. **(See Table 10)**

If the Model 8732 Flow Transmitter is used integrally with the Junction Box, it shall be assured that the mechanical contact areas of the Junction Box and Flow Transmitter comply with the requirements for flanged joints according to standard EN 50018, clause 5.2.

INSTALLATION INSTRUCTIONS:

The cable and conduit entry devices and blanking elements shall be of a certified flameproof type, suitable for the conditions of use and correctly installed. With the use of conduit, a certified stopping box shall be provided immediately to the entrance of the enclosure.

SPECIAL CONDITIONS FOR SAFE USE (X) (03ATEX2159X):

The relation between ambient temperature, process temperature and temperature class is to be taken from the table under (15 - description) above. (See **Table 9**).

If the Model 8742C Flow Transmitter is used integrally with the Junction Box, it shall be assured that the mechanical contact areas of the Junction Box and Flow Transmitter comply with the requirements for flanged joints according to standard EN 50018, clause 5.2.

INSTALLATION INSTRUCTIONS:

The cable and conduit entry devices and the closing elements shall be of a certified increased safety type, suitable for the conditions of use and correctly installed.

At ambient temperatures above 50°C, the flow meter shall be used with heat resistant cables with a temperature rating of at least 90°C.

A Junction Box in type of explosion protection increased safety "e" may be attached to the base of the Model 8742C Flow Transmitter, permitting remote mounting of the Models 8705 and 8711 Flowtubes.

Ambient temperature range of the Junction Box: -20°C to +65°C.

The Junction Box is classified as II 2 G EEx e IIB T6 and certified under KEMA 03ATEX2052X.

36	26.10 (663)	40.27 (1023)	40.88 (1038)	46.00 (1168)	0.19 (4.8)	29.08 (739)

(1) AS2129 Table D and E flange dimensions match ANSI 150# dimensions.

(2) 30- and 36-inch AWWA C207 Table 2 Class D rated to 150 psi at 150 °F.

(3) When 2 grounding rings are specified, add 0.25 inch (6.35 mm) for 0.50- through 14-inch (15 through 350 mm) flowtubes, add 0.50 inch (12.7 mm) for 16-inch (400 mm) and larger. When lining protectors are specified, add 0.25 inch (6.35 mm) for ½- through 12-inch (15 through 300 mm) flowtubes, add 0.50 inch (12.7 mm) for 14- through 36-inch (350 through 900 mm) flowtubes.

Dimensions with DIN Flanges

(1) Consult factory for larger line sizes.

(2) When 2 grounding rings are specified, add 6.35 mm (0.25 in.) for 15 mm through 350 mm (½- through 14 in.) flowtubes or 12.7 mm (0.50 in.) for 400 mm (16 in.) and larger. When lining protectors are specified, add 6.35 mm (0.25 in.) for 15 mm through 300 mm (½- through 12-in.) flowtubes, 12.7 mm (0.50 in.) for 350 mm through 900 mm (14- through 36-in.) flowtubes.

Magnetic Flowmeter Sizing

Flowmeter Sizing

Because of its effect on flow velocity, flowtube size is an important consideration. It may be necessary to select a magnetic flowmeter that is larger or smaller than the adjacent piping to ensure the fluid velocity is in the specified measuring range of the flowtube.

Suggested guidelines and examples for sizing normal velocities in different applications are listed in Table 16, Table 17, and Table 18. Operation outside these guidelines may also give acceptable performance.

TABLE 16. Sizing Guidelines

Application	Velocity Range (ft/s)	Velocity Range (m/s)
Normal Service	2–20	0.6–6.1
Abrasive Slurries	3–10	0.9–3.1
Non-Abrasive Slurries	5–15	1.5–4.6

To convert flow rate to velocity, use the appropriate factor listed in Table 16 and the following equation:

$$\text{Velocity} = \frac{\text{Flow Rate}}{\text{Factor}}$$

Example: SI Units

Magnet Size: 100 mm (factor from Table 17 = 492.0)

Normal Flow Rate: 800 L/min

$$\text{Velocity} = \frac{800 \text{ (L/min)}}{492.0}$$

$$\text{Velocity} = 1.7 \text{ m/s}$$

Example: English Units

Magnet Size: 4 inch (factor from Table 17 = 39.679)

Normal Flow Rate: 300 GPM

$$\text{Velocity} = \frac{300 \text{ (gpm)}}{39.679}$$

$$\text{Velocity} = 7.56 \text{ ft/s}$$

TABLE 17. Line Size vs. Conversion Factor

Nominal Line Size Inches (mm)	Gallons Per Minute Factor	Liters Per Minute Factor
0.15 (4)	0.055	0.683

Upstream/Downstream Piping Length

To ensure specification accuracy over widely varying process conditions, install the flowtube with a minimum of five straight pipe diameters upstream and two straight pipe diameters downstream from the electrode plane. See Figure 12. This procedure should adequately allow for disturbances created by elbows, valves, and reducers.

FIGURE 12. Upstream and Downstream Straight Pipe Diameters

Flowtube Grounding

A reliable ground path is required between the flowtube and the process fluid. Optional grounding rings, grounding electrodes, and lining protectors are available with 8700 Series flowtubes to ensure proper grounding. See Table 19 and Table 20.

TABLE 19. Grounding Options

Grounding Options	General Characteristics
No Grounding Options (grounding straps)	- Acceptable for conductive unlined pipe - Grounding straps provided by Rosemount Inc.
Grounding Electrode	- Same material as measurement electrodes - Sufficient grounding option when process fluid conductivity is greater than 100 microsiemens/cm - Not recommended in electrolysis or galvanic corrosion applications
Grounding Rings	- Low conductivity process fluids - Cathodic or electrolysis applications that may have stray currents in or around the process - Variety of materials for process fluid compatibility
Lining Protectors	- Protects upstream edge of flowtube from abrasive fluids - Permanently installed on flowtube - Protects liner material from over torquing of flange bolts - Provides ground path and eliminates need for grounding ring or grounding electrode

TABLE 20. Grounding Installation

Type of Pipe	Grounding Options			
	No Grounding Options	Grounding Rings	Grounding Electrodes	Lining Protectors
Conductive Unlined Pipe	Acceptable	Not Required	Not Required	Acceptable
Conductive Lined Pipe	Not Acceptable	Acceptable	Acceptable	Acceptable
Non-Conductive Pipe	Not Acceptable	Acceptable	Acceptable	Acceptable

Material Selection

Several liner types, electrode materials, and electrode types are available on Rosemount Magnetic Flowtubes to ensure compatibility with virtually any application. See Table 21 for information on liner types, Table 22 for information on electrode materials, and Table 23 for information on electrode types. Other material options not mentioned here are available. Contact your local sales representative for material selection. For further guidance on selecting materials, refer to the Magnetic Flowmeter Material Selection Guide located on Rosemount.com (document number 00816-0100-3033).

TABLE 21. Lining Material

Lining Material	General Characteristics
PFA	- Highly chemical-resistant - Excellent high temperature capabilities
Teflon (PTFE)	- Highly chemical-resistant - Excellent high temperature capabilities
Tefzel (ETFE)	- Highly chemical-resistant - Better abrasion resistance than Teflon
Polyurethane	- Excellent abrasion resistance - Limited chemical resistance
Neoprene	- Very good abrasion resistance - Better chemical resistance than polyurethane
Linatex Rubber	- Very good abrasion resistance - Limited chemical resistance especially in acids - Softer material than polyurethane and neoprene

TABLE 22. Electrode Material

Electrode Material	General Characteristics
316L Stainless Steel	- Good corrosion resistance - Good abrasion resistance - Not recommended for sulfuric or hydrochloric acids
Hastelloy C-276	- Better corrosion resistance - High strength - Good in slurry applications - Effective in oxidizing fluids
Tantalum	- Better chemical resistance - Not recommended for hydrofluoric acid, fluosilic acid, or sodium hydroxide
90% Platinum - 10% Iridium	- Best chemical resistance - Expensive material - Not recommended for aquaregia
Titanium	- Better chemical resistance - Better abrasion resistance - Good for sea water applications - Not recommended for hydrofluoric or sulfuric acid

TABLE 23. Electrode Type

Electrode Type	General Characteristics
Standard Measurement	- Costs least - Good for most applications
Bulletnose Electrodes	- Slightly more expensive - Best option for coating processes
Removable Electrode	- Most expensive - Better than standard electrode for coating processes

Ordering Information

Rosemount 8700 Series

Code	Options Continued	
Other Options		
B3	Integral Mount with Rosemount 8732C/8742C Transmitter	•
D1	High Accuracy Calibration [0.25% of rate from 3-30 ft/s (0.9-10 m/s)] matched flowtube and transmitter system ⁽⁸⁾	•
DT	Heavy Duty Tagging	•
DW	NSF Drinking Water Certification 24 inch (600mm) (0.5- to 24-inch [15 to 600 mm] sizes only) PTFE Teflon or ETFE liners (0.5- through 24-inch [15 through 600mm]), SS electrode material ⁽⁹⁾	•
H1	Rosemount 8701 flowtube lay length (available for 0.5- to 12-inch (15 to 300 mm) line sizes); spool piece or spacer: ASME B16.5 (ANSI) Class 150 or Class 300 flange and 304 stainless steel pipe	•
H2	Rosemount 8701 Flowtube lay length (available for 0.5- to 16-inch (15-400 mm) line sizes.)	•
H5	Foxboro® Model 2800 lay length (available for 3.0 to 18 inch (80 to 450mm line sizes)) spool piece: ASME B16.5 (ANSI) Class 150 flange and 304 stainless steel pipe.	•
H7	ABB Fischer & Porter® Model CopaX and MagX lay length (available for 0.5 to 12in (15 to 3000 mm line sizes)) spool piece: ASME B16.5 (ANSI) Class 150 flange and 304 stainless steel pipe.	•
J1	CM20 Conduit Adapter	•
J2	PG13.5 Conduit Adapter	•
Q4	Inspection Certificate-Calibration Data, ISO 10474 3.1B, (Flow Cal., 1-10ft/s [0.3-3 m/s])	•
Q5 ⁽¹¹⁾	Hydrostatic Testing Certification (place on sales order, not on model string)	•
Q8	Material Traceability Certificate per DIN 3.1 B	•
Q9	Material Traceability Certificate (electrodes only) per DIN 3.1B 337	•
Q15 ⁽¹⁰⁾ (11)	NACE Certificate	•
Q66	Welding Procedure Qualification Record Documentation	•
Q67	Welder Performance Qualification Record Documentation	•
Q68 ⁽¹²⁾	Welding Procedure Specification Documentation	•
Q70	Inspection Certificate Weld Examination, ISO 10474 3.1B – 0.5- to 12-inch [15-300 mm] flowtube line sizes – 14- to 18-inch [350-450 mm] flowtube line sizes – 20- to 36-inch [500-900 mm] flow tube line sizes	•
Typical Model Number: 8705 T SA 040 C1 W0 N0		

(1) Electrode options limited to two measurement electrodes or two measurement electrodes + third grounding electrode.

(2) Electrode options limited to two measurement electrodes or two measurement electrodes only.

(3) Lining Protectors not available.

(4) Option code limited to Liner material T, P, or F; cannot be ordered with ground rings, lining protectors AX or HX options.

(5) For use with E1 / K1 transmitter.

(6) Grounding Rings and Lining Protectors provide the same fluid grounding function. Lining Protectors available in Teflon (PTFE) and Tefzel (ETFE) only.

(7) Sealed, welded housing (Option Code W0 or W1) required. Only available with Teflon (PTFE) lining material (Option Code T) and 316L Stainless Steel, Hastelloy C-276, and 90% Platinum-10% Iridium electrode material (Option Codes S, H, and P). Not available with integral mount Rosemount 8712 transmitter. Sanitary connection codes A4 and A6 only available in line size code 020.

(8) Option Code must be ordered for both flowtube and transmitter.

(9) Pending approval, consult factory for availability.

(10) Order as a separate line item.

(11) Order by placing model code in manufacturing notes on sales order. This code does not belong in the model string.

(12) Order as a separate line item, this code does not belong in the model string.

ROSEMOUNT 8714 DQ4 ORDERING INFORMATION

Model	Description	Availability
8714DQ4	Reference Calibration Standard	•

Rosemount 8700 Series

Product Data Sheet

00813-0100-4727, Rev NA

July 2004

Tagging

The flowtube and transmitter will be tagged, at no charge, in accordance with customer requirements.

Transmitter tag character height is
0.125 in. (3.18 mm).

Flowtube tag: 40 character maximum.

Transmitter tag: see Configuration Data Sheet for character maximum.

Ordering Procedure

To order, select the desired flowtube and/or transmitter by specifying model codes from the ordering table.

For remote transmitter applications, note the cable specification requirements.

Flowtubes and transmitters must be selected from Product Data Sheet 00813-0100-4727.

Standard Configuration

Unless the Configuration Data Sheet is completed, the transmitter will be shipped as follows:

Engineering Units:	ft/sec
4 mA (1 V dc):	0
20 mA (5 V dc):	30
Tube Size:	3-inch
Empty Pipe:	Off
Flowtube Calibration Number:	1000005010000000

The Rosemount 8732C and the 8742C Transmitter are factory-calibrated with the attached flowtube size and appropriate calibration number.

Cable Requirements for Remote Transmitters

Description	Length	P/N
Signal Cable (20 AWG)	ft	08712-0061-0001
Belden 8762, Alpha 2411 equivalent	m	08712-0061-0003
Coil Drive Cable	ft	08712-0060-0001
(14 AWG) Belden 8720, Alpha 2442 equivalent	m	08712-0060-0003
Combination Signal and Coil Drive Cable	ft	08712-0752-0001
(18 AWG) ⁽¹⁾	m	08712-0752-0003

(1) Combination signal and coil drive cable is not recommended for high-signal magmeter system. For remote mount installations, combination signal and coil drive cable should be limited to less than 100 ft (30 m).

Remote transmitter installations require equal lengths of signal and coil drive cables. Integrally mounted transmitters are factory wired and do not require interconnecting cables.

Lengths from 5 to 1,000 feet (1.5 to 300 meters) may be specified, and will be shipped with the flowtube. Cable longer than 100 feet (30 meters) is not recommended for high-signal systems.

Custom Configuration (Option Code C1)

If Option Code C1 is ordered, the Configuration Data Sheet (CDS) must be submitted at the time of order.

Rosemount 8742C Configuration Data Sheet

Unless otherwise specified, transmitter will be shipped as ★ (default factory configuration).
